

Laboratory Activity 02 - Prompt History

Student: Cabudsan

Section: BES6-M

Date: August 2026

PROMPT 1

Q: "Hi, I'm working on our Numerical Methods lab activity. I need to create a Python script that generates an HTML dashboard with curve fitting results. I have the instructions but I'm not sure where to start. Can you guide me through the process?"

A: Explained the overall structure and provided a framework for the Python script.

My Action: I read through the lab instructions, set up the basic structure for lab02_cabudsan.py, and implemented the data loading and model definition.

PROMPT 2

Q: "I need help understanding the code structure and how to put it all together. Can you walk me through it?"

A: Broke down the code into sections and explained each part's purpose.

My Action: I followed the step-by-step guidance, copied the code components, and assembled the complete script.

PROMPT 3

Q: "I'm getting a FileNotFoundError when I try to run the script. What should I check?"

A: Explained that the Excel file path was incorrect and provided solutions.

My Action: I moved the Excel file to the correct folder and updated the file path in the code.

PROMPT 4

Q: "After saving everything, do I just run python lab02_cabudsan.py in the terminal?"

A: Confirmed the command.

My Action: I ran the script and generated the HTML dashboard.
